PLANT MATTERS

THE MEDICAL ECOLOGIES OF SIBERIAN BUDDHIST MEDICINE

Tatiana Chudakova | Assistant Professor
Department of Anthropology, Tufts University

This talk will focus on the committed entwinements between practitioners of Tibetan medicine in Siberia (emchi) and the plants they work into medicines. Dr. Chudakova will discuss how emchi medicine in Siberia curates plants' vital vegetalities by cultivating embodied practices of attention to human and nonhuman co-presences and histories. This medical and botanical practice makes explicit layered relations between postsocialist deindustrialization, Buddhist cosmologies, ailing human bodies, and vegetal life.
