Postdoctoral Fellowship Position

The McLaughlin lab at Tufts University, Medford, MA (located ~5 miles outside of Boston) is searching for a talented person to join our team. We are looking for a postdoctoral scientist interested in examining how bioelectric signals and genetic composition of cells interact to determine cell fate and pattern formation during the development and repair of organs and tissues. This project is sponsored by the Paul G. Allen Family Foundation and is part of a larger effort to understand morphogenesis at the Allen Discovery Center at Tufts (see link below for more information about the center “Reading and Writing the Morphogenetic Code”). Applicants should have a strong background in molecular biology and ideally some experience with electrophysiology and/or working with *Xenopus laevis*. Candidates will be interviewed beginning in September and will be expected to start as soon as possible. Application materials should include a CV and the names of 3 references sent to Kelly.McLaughlin@tufts.edu (http://ase.tufts.edu/biology/labs/mclaughlin/).
