Job Opening: Full-time Research Assistant, Tufts University (Medford, Massachusetts, USA)

The Spatial Cognition and Nutrition & Behavior Laboratories at Tufts University are soliciting resumes from junior researchers interested in gaining experience in an experimental psychology laboratory. Prospective candidates will hold an undergraduate degree in Psychology, Cognitive Science, Biopsychology, or related discipline, and have experience working or volunteering in an experimental laboratory. This will be a challenging and demanding position, requiring the management of projects and undergraduate research assistants across two laboratories, one examining issues related to navigation, spatial decision making, and embodied cognition, and the other examining similar topics but with an emphasis on nutritional interventions. The ideal candidate will carry strong analytical skills including light programming experience (e.g., MATLAB, R, SPSS Syntax), and the ability to independently work with large and complex data sets. Strong communication and scientific writing skills are a must, as the candidate will be managing undergraduate students and provided with opportunities to aid in composing and possibly authoring manuscripts. This is an ideal position for recent graduates looking to increase their experimental skills and experience in preparation for graduate school application. Interested candidates should send a letter of interest and resume to Dr. Holly A. Taylor (holly.taylor@tufts.edu)
