## “Accelerated GC/MS Analyses of Samples from Former Manufactured Gas Plant Sites.”

D.M. Mauro, S. Smarason, and A. Robbat, Jr.,

### **Abstract**

Collecting chemical data for site characterization and remediation at former manufactured gas plant (MGP) sites can be time consuming and costly, with sufficient data acquired at only a few sites. In response, EPRI has developed chemical analysis methods for utility use in generating data quickly and cost-effectively. This report presents results from a laboratory demonstration of sample preparation and analysis method for rapid determination of polycyclic aromatic hydrocarbons (PAHs) in soil.
